CHARCOAL PLEATED FILTERS

Eliminates odors as well as dust!

SMITH
FILTER CORPORATION

Filter out dust, pollen and odors - all at one time!

Smith's Charcoal Pleated Filters offer an economical way of removing both contaminants and odors from the air.

The Charcoal Pleated Filters are made with a carbon (coconut shell based) impregnated synthetic media, containing eight grams of carbon per square foot. The media is pleated, giving the filter 40% more surface area than a flat filter. With more surface area, larger quantities of dust, dirt and other airborne contaminants are collected, making this filter a higher efficiency filter. The pleats also allow for longer periods between changes.

The carbon is designed to absorb odors and being the synthetic material is impregnated with the carbon, the odors are practically eliminated as the air passes through the filter. This allows for clean, fresh air to be blown back into the environment.

The frame is a rigid, water resistant beverage board frame designed to support the media. The frame is glued evenly during manufacturing, attaching itself to the media firmly, therefore preventing any air bypass when in the air handling unit.

The white frame makes an attractive filter and each filter is individually shrink wrapped, keeping the carbon active much longer. An informational sheet is included in each filter, giving the customer pertinent information on the Charcoal Pleated Filter.

These filters are designed for both heaters and air conditioning units. They can also be used in air handling units. Because of the nature of the media, the resistance may be higher than a regular furnace filter. When using a Charcoal Pleated filter, it's important to check on it during the first month after installation to assure it isn't causing too much resistance in your unit.

The Smith Charcoal Pleated Filter is the ultimate in filtration! With the removal of pollen, dust, dirt plus the removal of unpleasant odors, this filter will turn your furnace into an air purifier - with just one filter!

Be sure to ask about Smith's other Pleated Filters... Smith Pleat, Perm-A-Foam (a permanent pleat), Pleated Inserts, 4" Mini Pleats, Rigid Cells, Type 60 Pleats and the Ammonia Lock Pleated Filters.

Contact your Smith Representative for more information on any of these products.

A large number of sizes are kept in stock, ready for immediate shipment. Special sizes are also available. When ordering specials, please give exact dimensions required.
